Rotaract Club of Xiamen University Malaysia | Rotary Club of Kuala Lumpur Dynamics | Rotary Club of Tun Razak Exchange

SDC Hackathon

Technical Tools Declaration

Hosted by Xiamen University Malaysia (XMUM) AI Club

Submission Deadline: 25 October 2026

Instructions: Declare every API, cloud service, AI tool, dataset, model, and sponsor resource your team used to build the project. Complete every section; where a category does not apply, tick "No" or write "None" – do not leave it blank. Submit as a single PDF document named "SDC2026_TeamName_TechDeclaration.pdf" together with your project submission. Undeclared third-party resources discovered at judging may affect your score or eligibility.

SDC HACKATHON 2026

Technical & Tools Declaration

Hosted by Xiamen University Malaysia (XMUM) AI Club
Submission Deadline: [Insert date]

Instructions: Declare every API, cloud service, AI tool, dataset, model, and sponsor resource your team used to build the project. Complete every section; where a category does not apply, tick "No" or write "None" – do not leave it blank. Submit as a single PDF document named "SDC2026_TeamName_TechDeclaration.pdf" together with your project submission. Undeclared third-party resources discovered at judging may affect your score or eligibility.

1. Team & Project Overview

Team Name	ONE ThirdWheel
Project / Solution Name	TeamSync
Name (Leader)	Hussein Al-Manifi
Email & Phone (Leader)	halmanifi@gmail.com +6011 4008 8061
University Affiliation(s)	University of Malaya
Live Prototype URL	https://one-third-wheel.replit.app
Code Repository URL (public / access granted to judges)	https://github.com/HuSSonO3/ONE-ThirdWheel.git

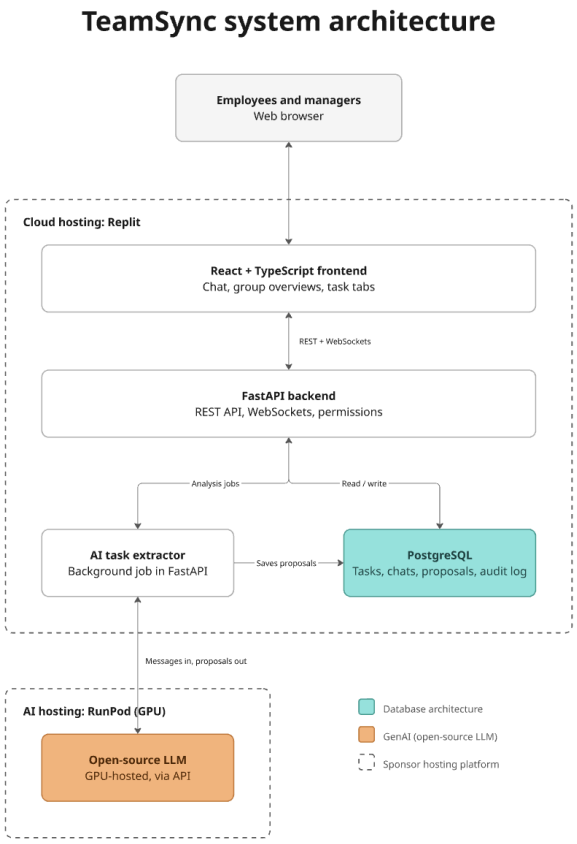

2. Architecture & Technology Stack

2.1 System Architecture Overview

Describe how the components declared in this document connect end-to-end (e.g., user interface → backend → AI model/API → database → cloud hosting). Attach a system block diagram as an appendix if available.

[Maximum 200 words]

See Appendix.

2.2 Languages, Frameworks & Libraries

List the main programming languages, frameworks, and third-party libraries that your team did not create. Open-source use is permitted provided it is declared and properly licensed/attributed.

Name & Version	Purpose in Project	License
Python & 3.12	Backend	PSF License (Python Software Foundation License)
React & 19.1	Frontend	MIT
FastAPI & 0.115	Backend (API)	MIT
TypeScript & 5.8.3	Frontend	Apache-2.0
Sqlalchemy & 2	Backend (DB)	MIT
Psycopg & 3.2	Backend (DB)	LGPL-3.0
Alembic & 1.13	Backend (DB)	MIT
Pillow & 13	Backend	MIT-CMU (HPND-style)
Email-validator & 2.3	Backend	Unlicense (public domain)
Python-multipart & 0.0.32	Backend	Apache-2.0
Pyyaml & 6.0.3	Backend (YML)	MIT
Argon2-cffi & 25.1	Backend (Password Hashing)	MIT
Uvicorn & 0.3	Backend (ASGI)	BSD-3-Clause
Httpx & 0.27	Backend (API)	BSD-3-Clause
Ruff & 0.6	Linter	MIT
Openapi-spec-validator & 0.9	Backend	Apache-2.0
Datamodel-code-generator & 0.86	Backend	MIT
Jsonschema & 4.26	Backend	MIT
Openapi-typescript & 7.13	Frontend (Converter)	MIT
Vite & 6.3.5	Frontend	MIT

3. APIs & Cloud Services

3.1 External APIs

List every external API your solution calls (GenAI, maps, payments, messaging, data feeds, etc.). Do not include API keys or secrets in this document.

API & Provider	Purpose in Project	Access Tier (free / paid / sponsor-provided)
-	-	-

3.2 Cloud Platforms & Deployment

List every cloud service used for hosting, storage, databases, authentication, or compute, and indicate how the prototype is deployed.

Service & Provider	Purpose in Project	Plan / Region
-	-	-

4. AI Tools, Models & Datasets

4.1 AI Models Used in the Solution

List every AI model embedded in or called by your application, including pre-trained, fine-tuned, and self-trained models.

Model & Version	Source / Provider	Usage (pre-trained / fine-tuned / self-trained)	License / Terms
Qwen3-8B	vLLM	pre-trained	Apache-2.0

4.2 Datasets

List all datasets used for training, fine-tuning, evaluation, or in the running application. State clearly if a dataset contains personal or sensitive data.

Dataset Name	Source / URL	Type (public / private / self-collected / synthetic)	License	Personal Data? (Y/N)
Test	-	Synthetic	-	N

4.3 AI-Assisted Development Tools

Tools used to help write code, design, content, or documentation (e.g., chat assistants, code completion tools, image generators). Declaring these tools does not reduce your score; undeclared use may.

Did your team use any generative-AI tool to help create code, design, text, or other project material?

☑ Yes ☐ No

If yes, list them below:

Tool & Version	**Used For**	**Extent of Use (minor / moderate / major)**
Claude	Code Generation, Project Helper	Major
Codex	Code Generation	Minor
ChatGPT	Rephraser	Minor
Replit	Code Generation / Design	Major

Briefly describe how your team reviewed, tested, and took responsibility for AI-generated output:

[Maximum 100 words]

We created the architecture, features, ERD, and details by ourselves. We then tested our theories through Claude models to check for feasibility and to get suggestions on pain points we might have missed. Every output from the generative models is read and pushed back against if needed. Most of our push back was in designing our feature spec and plans as it didn't provide the results as we hoped for but it still created some valuable inputs.

5. Sponsor-Provided Resources

Declare any official SDC sponsor-provided GenAI API, cloud credits, tools, mentoring, or data that your team used.

Did your project use any official SDC sponsor-provided resource?

☑ Yes ☐ No

If yes, list them below:

Sponsor	**Resource (API / credits / platform / data)**	**How It Was Used in the Project**
Replit	Credits	Used to co design the app, and generate code.
RunPod	Credits	Used to host an open source model.

Was the sponsor resource essential to the core functionality of the prototype, or could it be replaced? Explain briefly:

[Maximum 100 words]

Yes, as using Replit was useful due to its strong design capabilities. Not only that but its ability to connect to most of the technologies that we use “VS code, Claude, Codex” seamlessly to help us with the tasks as needed. As for RunPod, it created an opportunity for us to host an open source model as one of the cores of our project instead of using an API Key that would’ve been exhausted much faster.

6. Security, Privacy & Responsible Use

6.1 Data Handling & Privacy

What user or personal data does your application collect, store, or send to third-party services (including AI APIs)? How is it protected, and how long is it kept? State "No user data is collected" if applicable.

[Maximum 150 words]

It collects their names, emails, job title, role, and timezone. It only stores in the database, it does not sell it or share it. Their data lasts as long as the user lasts in the organization (Up to the org discretion).

6.2 Known Limitations & Risks

Identify the main technical limitations of your AI components (e.g., hallucination, bias, rate limits, dependency on a single provider) and any mitigation you have implemented.

[Maximum 150 words]

Its thinking mode by default so it burns through the tokens budget and returns empty content sometimes, even though it's a decent model it still hits the ceiling of the 8B models. It also has some JSON drifts so we needed some prose.
To mitigate these issues we first set the enable thinking to false in every request, we keep the json schema grammar plus the validation to strip the nulls and retry. And the major thing is we always need a human on the loop. The AI should never be able to commit without explicit permission.

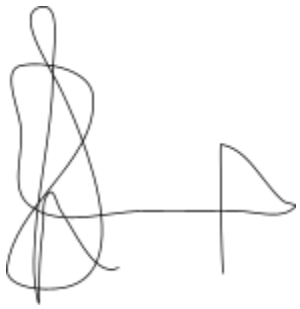

7. Compliance & Readiness Checklist

Tick all boxes that apply before submitting.

- ☑ All APIs, cloud services, AI tools, models, and datasets used in the project are declared in this document.
- ☑ All third-party code, datasets, and models are used in accordance with their licenses, and attribution is provided where required.
- ☑ No API keys, passwords, or other credentials are exposed in the code repository, prototype, or this document.
- ☑ Any use of generative-AI tools for development has been disclosed and reviewed by the team.
- ☑ Any use of official SDC sponsor resources has been declared in Section 5.
- ☑ The prototype described here is accessible to judges through the links provided in Section 1.
- ☑ All fields in this template have been completed within the word limits stated.

8. Declaration

By submitting this document, the team leader confirms that the information provided is complete and accurate to the best of the team's knowledge, and that every API, cloud service, AI tool, dataset, model, and sponsor resource used in the project has been declared.
